Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species 1, claims 1-7 are directed to a flash memory device for connecting to a PCI Express-defined bus, the flash memory device comprising: a flash memory module for storing data; a connector for connecting to the PCI Express-defined bus, thereby allowing packets to be transmitted between the PCI Express-defined bus and the flash memory device; and a flash controller for controlling the flash memory module and the connector.

Species 2, claims 8-23 are directed to a flash memory device comprising: flash memory mappable to an address space of a host that is separate from the flash memory device; a PCI Express-defined connector for allowing the host to communicate with the flash memory device; and a PCI Express-compatible controller supporting this communication using a command word setting.

Species 3, claims 24-36 are directed to a transaction layer packet (TLP) compatible with PCI Express, the TLP comprising: a header field; and a data payload field, wherein the data payload field can include a command word setting relating to an operation to be performed on a flash memory.

Art Unit: 2182

Species 4, claims 37-60 are directed to method of performing an operation on a flash device, the operation being requested by a host separate from the flash device, the operation being PCI Express-compatible, the method comprising: sending a first memory request from the host to the flash device, wherein the first memory request includes a header and a command word setting, wherein the command word setting indicates the operation to be performed on the flash device.

Species 5, claims 61- 74 are directed to a flash memory controller for controlling a flash memory device, the flash memory controller comprising: a processor for performing at least one operation; and arbitration logic coupled to the processor, wherein data from the arbitration logic allows the processor to perform the at least one operation for a flash memory device.

Species 6, claims 75-88 are directed to a method for managing flash memory in a flash memory system including a plurality of flash memory devices, the method comprising:

(a) initiating at least one operation; (b) conducting a search for a destination block within a flash memory device; and (c) relocating valid data within the flash memory device from a source block to the destination block, wherein the at least one operation is performed for a particular flash memory device of the plurality of flash memory devices.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election. Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP 5809.02(a).

Should applicant traverse on the ground that the species are not patentability distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Art Unit: 2182
